CONTENTS TO VOLUME 54

PART 1 11 JULY 1972

Equilibrium and relaxation in turbulent wakes. R. NARASIMHA and A. PRABHU *page* 1

Turbulent non-equilibrium wakes. A. PRABHU and R. NARASIMHA 19

The wall region in turbulent shear flow. JAMES M. WALLACE, HELMUT ECKELMANN and ROBERT S. BRODKEY 39

Rotation of a cylinder about an eccentric parallel axis in a viscous fluid. CHANG-YI WANG 49

Wave propagation across the continental shelf. JOHN W. MILES 63

Some numerical solutions of a variable-coefficient Korteweg–de Vries equation (with applications to solitary wave development on a shelf). R. S. JOHNSON 81

The stability of Poiseuille flow in a pipe of circular cross-section. HAROLD SALWEN and CHESTER E. GROSCH 93

Linear spatial stability of pipe Poiseuille flow. V. K. GARG and W. T. ROULEAU 113

Theoretical investigation of the interfacial stability of inviscid fluids in motion, considering surface tension. JAN BERGHMANS 129

Instability of unsteady flows or configurations. Part 2. Convective instability. CHIA-SHUN YIH and CHIN-HSIU LI 143

On steady convection in a porous medium. ENOK PALM, JAN ERIK WEBER and ODDMUND KVERNVOLD 153

Nonlinear motions induced by moving thermal waves. RICHARD E. YOUNG, GERALD SCHUBERT and KENNETH E. TORRANCE 163

REVIEWS

Flow Research on Blading, edited by L. S. Dzung 188

Cavitation, by R. T. Knapp, J. W. Daily and F. G. Hammitt 189

PART 2 25 JULY 1972

Nonlinear internal gravity waves in a slowly varying medium. R. GRIMSHAW 193

Propagation of Alfvén–gravitational waves in a stratified perfectly conducting flow with transverse magnetic field. N. RUDRAIAH and M. VENKATACHALAPPA 209

Momentum transport by gravity waves in a perfectly conducting shear flow. N. RUDRAIAH and M. VENKATACHALAPPA 217

The mechanics of an organized wave in turbulent shear flow. Part 2. Experimental results. A. K. M. F. Hussain and W. C. Reynolds *page* 241

The mechanics of an organized wave in turbulent shear flow. Part 3. Theoretical models and comparisons with experiments. W. C. Reynolds and A. K. M. F. Hussain 263

Secondary flows in ducts of square cross-section. B. E. Launder and W. M. Ying 289

Strong shock propagation through decreasing density. D. A. Freiwald 297

Three-dimensional wings in hypersonic flow. R. Hillier 305

On the response of a sphere to an acoustic pulse. Samuel Temkin 339

Roll-diameter dependence in Rayleigh convection and its effect upon the heat flux. G. E. Willis, J. W. Deardorff and R. C. J. Somerville 351

Upstream influence of a dipole in rotating flow. John W. Miles 369

Part 3 8 August 1972

Sting-free measurements of sphere drag in laminar flow. M. Vlajinac and E. E. Covert 385

Non-local effects in the stability of flow between eccentric rotating cylinders. R. C. DiPrima and J. T. Stuart 393

A temperature adjustment process in a Boussinesq fluid via a buoyancy-induced meridional circulation. Takeo Sakurai and Takuya Matsuda 417

Note on the symmetrics of certain material tensors for a particle in Stokes flow. E. J. Hinch 423

Microscale pressure fluctuations near waves being generated by the wind. J. A. Elliott 427

Propagation of weak shock waves through turbulence. Kenneth J. Plotkin and A. R. George 449

Motion due to a moving internal heat source. H. A. Douglas, P. J. Mason and E. J. Hinch 469

Large-scale instabilities of turbulent wakes. W. C. Reynolds 481

Errors in static pressure measurements due to protruding pressure taps. H. Zogg and H. Thomann 489

A similarity solution for viscous internal waves. N. H. Thomas and T. N. Stevenson 495

Nonlinear energy transfer in gravity–capillary wave spectra, with applications. G. R. Valenzuela and M. B. Laing 507

Bounds for heat transport in a porous layer. F. H. Busse and D. D. Joseph 521

Conjugate-flow theory for heterogeneous compressible fluids, with application to non-uniform suspensions of gas bubbles in liquids. T. Brooke Benjamin *page* 545

Experiments on the flow past spheres at very high Reynolds numbers. Elmar Achenbach 565

Part 4 22 August 1972

On the breaking of standing internal gravity waves. Isidoro Orlanski 577

Convection in boxes: experiments. K. Stork and U. Müller 599

An electrochemical study of flow instability on a rotating disk. Der-Tau Chin and Mitchell Litt 613

On the vertical transport due to fingers in double diffusive convection. R. B. Lambert and J. W. Demenkow 627

The stability of a helical vortex filament. Sheila E. Widnall 641

The solution of sharp-cone boundary-layer equations in the plane of symmetry. John W. Murdock 665

Semi-infinite vortex trails, and their relation to oscillating airfoils. D. Weihs 679

Experiments on Taylor columns in rotating stratified fluids. Peter A. Davies 691

On the mechanism of blocking in a stratified fluid. D. D. Freund and R. E. Meyer 719

Measurements of a laminar wake in a confined stratified fluid. P. Laws and T. N. Stevenson 745

On trapped oscillations in a slightly viscous rotating fluid. K. Stewartson 749

Reviews

Combustion Aerodynamics, by J. M. Beér and N. A. Chigier 762

Mécanique des Fluides, volume III, by E. A. Brun, A. Martinot-Lagarde and J. Mathieu 763

JOURNAL OF FLUID MECHANICS

The JOURNAL OF FLUID MECHANICS exists for the publication of theoretical and experimental investigations of all aspects of the mechanics of fluids.

EDITORS

PROF. G. K. BATCHELOR, DR H. K. MOFFATT

Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge CB3 9EW, England

ASSOCIATE EDITORS

PROF. G. F. CARRIER, *Pierce Hall, Harvard University, Cambridge, Massachusetts* 02138, *U.S.A.*

DR W. C. GRIFFITH, *Building* 102, *Plant* 1, *Lockheed Missiles and Space Company, P.O. Box* 504, *Sunnyvale, California* 94088, *U.S.A.*

PROF. M. J. LIGHTHILL, *Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge CB3 9EW, England.*

PROF. J. W. MILES, *Institute of Geophysics and Planetary Physics, University of California, La Jolla, California* 92038, *U.S.A.*

PROF. O. M. PHILLIPS, *Department of Earth and Planetary Sciences, The Johns Hopkins University, Baltimore, Maryland* 21218, *U.S.A.*

PROF. L. E. SCRIVEN, *Department of Chemical Engineering and Materials Science, University of Minnesota, Minneapolis, Minnesota* 55455, *U.S.A.*

ASSISTANT EDITORS

DR M. D. COWLEY (*Cambridge*), PROF. S. H. DAVIS (*Johns Hopkins*)
DR H. E. HUPPERT (*Cambridge*), DR M. E. MCINTYRE (*Cambridge*)

Authors wishing to have papers published in the JOURNAL should communicate them to any Editor or Associate Editor named above, choosing one in their own country where possible. The submission of two or three copies will expedite the process of assessment.

Authors are urged to write their papers clearly and attractively, in order to ensure that their work will be readily accessible to readers.

Manuscripts should be typed in double spacing on one side of the paper only, with references listed at the end in alphabetical order of authors. Drawings should be done in Indian ink on plain white or transparent paper, and should not be larger than 40 cm by 60 cm. Lettering should be shown clearly in pencil for reproduction by the printer, and as far as possible information relating to a figure should be placed in the caption rather than on the figure. A typed list of captions should be provided at the end of the manuscript. Proofs of papers from overseas will usually be despatched to authors by airmail. There is no charge for publication. Authors are entitled to 50 offprints of a paper in the JOURNAL free of charge, and additional offprints can be purchased if ordered in advance.

SUBSCRIPTIONS

The JOURNAL OF FLUID MECHANICS is published twice a month. Single parts £2.50 net ($7.50 in the U.S.A.) plus postage. Four parts form a volume The subscription price of a volume (which includes postage) is £8.00 net ($25.00 in the U.S.A.).

Copies of the journal for subscribers in the United States of America are sent by air to New York to arrive with the minimum delay. Second class postage is paid at New York, N.Y.

Claims for missing issues will be considered only if made after receipt of the subsequent issue.

CONTENTS TO VOLUME 55

PART 1 12 SEPTEMBER 1972

A model for the micro-structure in ciliated organisms. JOHN BLAKE *page* 1

A note on the laminar mixing of two uniform parallel semi-infinite streams. J. B. KLEMP and ANDREAS ACRIVOS 25

The vortex street in the wake of a vibrating cylinder. OWEN M. GRIFFIN and CHARLES W. VOTAW 31

Steady two-dimensional viscous flow in a jet. K. CAPELL 49

Structure of the Reynolds stress near the wall. W. W. WILLMARTH and S. S. LU 65

The intermittent small-scale structure of turbulence: data-processing hazards. H. TENNEKES and J. C. WYNGAARD 93

The equilibrium configuration of a slowly rotating mass of liquid in the presence of a poloidal magnetic field. C. SOZOU 105

Kelvin waves on oceanic boundaries. JOHN W. MILES 113

Waves generated in the configuration of a magnetically confined and field-permeated axisymmetric jet. LIM CHEE-SENG 129

Transmission of water waves through small apertures. D. C. GUINEY, B. J. NOYE and E. O. TUCK 149

Viscous interaction over concave and convex surfaces at hypersonic speeds. S. MOHAMMADIAN 163

REVIEWS

Basic Engineering Thermodynamics, by F. J. W. Wallace and W. A. Linning 177

A Course in Thermodynamics, volume 2, by J. Kestin 177

Thermodynamics and Statistical Mechanics, by L. M. Grossman 177

A Course in Statistical Thermodynamics, by J. Kestin and J. R. Dorfman 177

An Introduction to Statistical Mechanics, by P. Dennery 180

Non-equilibrium Thermodynamics, by I. Gyarmati 180

Statistical Mechanics at the Turn of the Decade, edited by E. G. D. Cohen 181

Lecture Notes in Physics. Volume 7. Lectures in Statistical Physics, edited by J. Ehlers, K. Hepp and H. A. Weidenmüller 181

Introductory Gas Dynamics, by A. J. Chapman and W. F. Walker 183

Thermofluid Dynamics, by A. J. Reynolds 183

Compressible-Fluid Dynamics, by P. Z. Thompson page 183

Chocs et Ondes de Choc, edited by A. J. Jaumotte 183

Selected Writings of Hunter Rouse, edited by J. F. Kennedy and E. O. Macagno 187

Theory of Viscoelasticity: an Introduction, by R. M. Christensen 188

An Introduction to Turbulence and its Measurement, by P. Bradshaw 189

PART 2 26 SEPTEMBER 1972

An investigation of particle trajectories in two-phase flow systems. S. A. MORSI and A. J. ALEXANDER 193

Mixed convection over a heated horizontal plane. A. A. TOWNSEND 209

Cross-waves. Part 1. Theory. J. J. MAHONY 229

Cross-waves. Part 2. Experiments. B. J. S. BARNARD and W. G. PRITCHARD 245

On self-similar blast waves headed by the Chapman–Jouguet detonation. A. K. OPPENHEIM, A. L. KUHL and M. M. KAMEL 257

Thermal convection in a horizontal fluid layer with uniform volumetric energy sources. F. A. KULACKI and R. J. GOLDSTEIN 271

A note on the angular dispersion of a fluid line element in isotrophic turbulence. S. CORRSIN and M. J. KARWEIT 289

An experimental and analytical investigation of angular momentum exchange in a rotating fluid. M. DUNST 301

Nonlinear waves in a Kelvin–Helmholtz flow. ALI HASAN NAYFEH and WILLIAM S. SARIC 311

On the forced heat transfer from a hot film embedded in the wall in two-dimensional unsteady flow. T. J. PEDLEY 329

Two-dimensional boundary layers in a free stream which oscillates without reversing. T. J. PEDLEY 359

PART 3 10 OCTOBER 1972

Pointed bubbles in slow viscous flow. J. D. BUCKMASTER 385

Self-induced oscillations in an open water-channel with slotted walls. P. L. BETTS 401

Free and forced convection from fine hot wires. W. W. WOOD 419

Theory of optimum shapes in free-surface flows. Part 1. Optimum profile of sprayless planing surface. T. YAO-TSU WU and ARTHUR K. WHITNEY 439

Theory of optimum shapes in free-surface flows. Part 2. Minimum drag profiles in infinite cavity flow. ARTHUR K. WHITNEY *page* 457

An investigation of high-wavenumber temperature and velocity spectra in air. NOEL E. J. BOSTON and R. W. BURLING 473

A nonlinear analysis of pulsatile flow in arteries. S. C. LING and H. B. ATABEK 493

Nonlinear distortion of the Kelvin ship-wave pattern. N. HOGBEN 513

A class of exact, time-dependent, free-surface flows. M. S. LONGUET-HIGGINS 529

Low order models representing realizations of turbulence. EDWARD N. LORENZ 545

Side-wall boundary layers in rotating axial flow. L. G. REDEKOPP 565

PART 4 24 OCTOBER 1972

Nonlinear baroclinic instability of a continuous zonal flow of viscous fluid. P. G. DRAZIN 577

Forced resonant second-order interaction between damped internal waves. A. D. MCEWAN, D. W. MANDER and R. K. SMITH 589

Dissipation and breakdown of a wing-tip vortex. A. MAGER 609

Water-drop response to sudden accelerations. P. G. SIMPKINS and E. L. BALES 629

Wave motion of low-tension interfaces with electrical double layers. C. A. MILLER 641

Statistical mechanics of the Burgers model of turbulence. TOMOMASA TATSUMI and SHIGEO KIDA 659

Axisymmetric slow viscous flow past an arbitrary convex body of revolution. MICHAEL J. GLUCKMAN, SHELDON WEINBAUM and ROBERT PFEFFER 677

Some exact statistics of two-dimensional viscous flow with random forcing. PHILIP DUNCAN THOMPSON 711

Flow in a deep turbulent boundary layer over a surface distorted by water waves. A. A. TOWNSEND 719

A point explosion in an arbitrary atmosphere. Y. M. TREVE and O. P. MANLEY 737

The rheology of a suspension of nearly spherical particles subject to Brownian rotations. L. G. LEAL and E. J. HINCH 745

INDEX TO VOLUME 55 766

JOURNAL OF FLUID MECHANICS

The JOURNAL OF FLUID MECHANICS exists for the publication of theoretica and experimental investigations of all aspects of the mechanics of fluids.

EDITORS

PROF. O. M. PHILLIPS, *Department of Earth and Planetary Sciences, The Johns Hopkins University, Baltimore, Maryland* 21218, *U.S.A.*

PROF. L. E. SCRIVEN, *Department of Chemical Engineering and Materials Science, University of Minnesota, Minneapolis, Minnesota* 55455, *U.S.A.*

ASSISTANT EDITORS

DR M. D. COWLEY (*Cambridge*), PROF. S. H. DAVIS (*Johns Hopkins*)
DR H. E. HUPPERT (*Cambridge*), DR M. E. MCINTYRE (*Cambridge*)

Authors wishing to have papers published in the JOURNAL should communicate them to any Editor or Associate Editor named above, choosing one in their own country where possible. The submission of two or three copies will expedite the process of assessment.

Authors are urged to write their papers clearly and attractively, in order to ensure that their work will be readily accessible to readers.

Manuscripts should be typed in double spacing on one side of the paper only, with references listed at the end in alphabetical order of authors. Drawings should be done in Indian ink on plain white or transparent paper, and should not be larger than 40 cm by 60 cm. Lettering should be shown clearly in pencil for reproduction by the printer, and as far as possible information relating to a figure should be placed in the caption rather than on the figure. A typed list of captions should be provided at the end of the manuscript. Proofs of papers from overseas will usually be despatched to authors by airmail. There is no charge for publication. Authors are entitled to 50 offprints of a paper in the JOURNAL free of charge, and additional offprints can be purchased if ordered in advance.

SUBSCRIPTIONS

The JOURNAL OF FLUID MECHANICS is published twice a month. Single parts £2.50 net ($7.50 in the U.S.A.) plus postage. Four parts form a volume The subscription price of a volume (which includes postage) is £8.00 net ($25.00 in the U.S.A.).

Copies of the journal for subscribers in the United States of America are sent by air to New York to arrive with the minimum delay. Second class postage is paid at New York, N.Y.

Claims for missing issues will be considered only if made after receipt of the subsequent issue.

CONTENTS TO VOLUME 56

PART 1 14 NOVEMBER 1972

Conditionally sampled measurements near the outer edge of a turbulent boundary layer. R. A. ANTONIA *page* 1

The boundary layer in a shock tube. J. D. A. WALKER and S. C. R. DENNIS 19

Capsular flow in pipelines. A. E. VARDY, M. I. G. BLOOR and J. A. FOX 49

Creeping flow around a deforming sphere. S. P. LIN and A. K. GAUTESEN 61

The energy balance in modulated plane Poiseuille flow. D. M. HERBERT 73

Asymptotic analysis of premixed burning with large activation energy. FRANCIS E. FENDELL 81

On the unsteady expansion of a gas into a near vacuum. R. E. GRUNDY 97

On the radiation and scattering of short surface waves. Part 1. F. G. LEPPINGTON 101

Three-dimensional MHD duct flows with strong transverse magnetic fields. Part 3. Variable-area rectangular ducts with insulating walls. J. S. WALKER, G. S. S. LUDFORD and J. C. R. HUNT 121

Laser anemometry: a report on EUROMECH 36. F. DURST, A. MELLING and J. H. WHITELAW 143

Boundary-layer development at a two-dimensional rear stagnation point. A. J. ROBINS and J. A. HOWARTH 161

Solution of the wedge entry problem by numerical conformal mapping. O. F. HUGHES 173

PART 2 28 NOVEMBER 1972

An equatorial boundary layer. J. M. DOWDEN 193

A free-streamline theory for bluff bodies attached to a plane wall. MASARU KIYA and MIKIO ARIE 201

The motion of a plate in a rotating fluid at an arbitrary angle of attack. DAVID C. WILCOX 221

The interaction of large amplitude shallow-water waves with an ambient shear flow: non-critical flows. P. A. BLYTHE, Y. KAZAKIA and E. VARLEY 241

Simple waves on shear flows: similarity solutions. N. C. FREEMAN 257

Numerical calculation of internal wave motions. JAMES A. YOUNG and C. W. HIRT 265

Waves in a gas in solid-body rotation. J.B. Morton and E.J. Shaughnessy *page* 277

Test-field model for inhomogeneous turbulence. Robert H. Kraichnan 287

A rotating spherical liquid drop in an electric field. C. Sozou 305

Statistical hydromechanics of disperse systems. Part 3. Pseudo-turbulent structure of homogeneous suspensions. Yu. A. Buyevich 313

Some properties of sink-flow turbulent boundary layers. W. P. Jones and B. E. Launder 337

Finite amplitude doubly diffusive convection. Joe M. Straus 353

The hydrodynamic interaction of two small freely-moving spheres in a linear flow field. G. K. Batchelor and J. T. Green 375

Part 3 12 December 1972

The determination of the bulk stress in a suspension of spherical particles to order c^2. G. K. Batchelor and J. T. Green 401

Upwelling of a stratified fluid in a rotating annulus: steady state. Part 1. Linear theory. J. S. Allen 429

Experiment on the geometry of the fine-structure regions in fully turbulent fluid. Albert Yi-Shuong Kuo and Stanley Corrsin 447

Three-dimensional MHD duct flows with strong transverse magnetic fields. Part 4. Fully insulated, variable-area rectangular ducts with small divergences. J. S. Walker and G. S. S. Ludford 481

The development of magnetohydrodynamic flow due to the passage of an electric current past a sphere immersed in a fluid. C. Sozou 497

An investigation of shock strengthening in a conical convergent channel. Robert E. Setchell, Erik Storm and Bradford Sturtevant 505

On the solution of the Navier–Stokes equations for a spherically symmetric expanding flow. N. C. Freeman and S. Kumar 523

Effects of spanwise rotation on the structure of two-dimensional fully developed turbulent channel flow. James P. Johnston, Robert M. Halleen and Dietrich K. Lezius 533

Flow visualization of the near-wall region in a drag-reducing channel flow. G. L. Donohue, W. G. Tiederman and M. M. Reischman 559

High Reynolds number steady separated flow past a wedge of negative angle. J. B. Klemp and Andreas Acrivos 571

The influence of surface-active contamination on the initiation of wind waves. John C. Scott 591

Review

The Thermodynamics of Simple Materials with Fading Memory, by W. A. Day 607

PART 4 28 DECEMBER 1972

Hele Shaw flows with a free boundary produced by the injection of fluid into a narrow channel. S. RICHARDSON *page* 609

Heat transfer in a periodic boundary layer near a two-dimensional stagnation point. HIROSHI ISHIGAKI 619

Viscous effects in a vertically propagating internal wave. D. GORDON and T. N. STEVENSON 629

The relaxation of stress in a ν-fluid with reference to the decay of homogeneous turbulence J. M. DOWDEN 641

Asymptotic analysis of turbulent channel and boundary-layer flow. WILLIAM B. BUSH and FRANCIS E. FENDELL 657

The excess noise field of subsonic jets. D. G. CRIGHTON 683

Experiments on the nonlinear stages of free-shear-layer transition. RICHARD W. MIKSAD 695

A general method for solving steady-state internal gravity wave problems D. G. HURLEY 721

Heat transfer from hypersonic turbulent flow at a wedge compression corner. G. T. COLEMAN and J. L. STOLLERY 741

Compressible corner flow. BERNARD C. WEINBERG and STANLEY G. RUBIN 753

Wave mechanics of breakdown. M. T. LANDAHL 775

Note on the rheology of a dilute suspension of dipolar spheres with weak Brownian couples. E. J. HINCH and L. G. LEAL 803

INDEX TO VOLUME 56 814

JOURNAL OF FLUID MECHANICS

The JOURNAL OF FLUID MECHANICS exists for the publication of theoretical and experimental investigations of all aspects of the mechanics of fluids.

EDITORS

PROF. G. K. BATCHELOR, DR H. K. MOFFATT

Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge CB3 9EW, England

ASSOCIATE EDITORS

PROF. G. F. CARRIER, *Pierce Hall, Harvard University, Cambridge, Massachusetts* 02138, *U.S.A.*

DR W. C. GRIFFITH, *Building* 102, *Plant* 1, *Lockheed Missiles and Space Company, P.O. Box* 504, *Sunnyvale, California* 94088, *U.S.A.*

PROF. M. J. LIGHTHILL, *Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge CB3 9EW, England.*

PROF. J. W. MILES, *Institute of Geophysics and Planetary Physics, University of California, La Jolla, California* 92038, *U.S.A.*

PROF. O. M. PHILLIPS, *Department of Earth and Planetary Sciences, The Johns Hopkins University, Baltimore, Maryland* 21218, *U.S.A.*

PROF. L. E. SCRIVEN, *Department of Chemical Engineering and Materials Science, University of Minnesota, Minneapolis, Minnesota* 55455, *U.S.A.*

ASSISTANT EDITORS

DR M. D. COWLEY (*Cambridge*), PROF. S. H. DAVIS (*Johns Hopkins*)
DR H. E. HUPPERT (*Cambridge*), DR M. E. MCINTYRE (*Cambridge*)

Authors wishing to have papers published in the JOURNAL should communicate them to any Editor or Associate Editor named above, choosing one in their own country where possible. The submission of two or three copies will expedite the process of assessment.

Authors are urged to write their papers clearly and attractively, in order to ensure that their work will be readily accessible to readers.

Manuscripts should be typed in double spacing on one side of the paper only, with references listed at the end in alphabetical order of authors. Drawings should be done in Indian ink on plain white or transparent paper, and should not be larger than 40 cm by 60 cm. Lettering should be shown clearly in pencil for reproduction by the printer, and as far as possible information relating to a figure should be placed in the caption rather than on the figure. A typed list of captions should be provided at the end of the manuscript. Proofs of papers from overseas will usually be despatched to authors by airmail. There is no charge for publication. Authors are entitled to 50 offprints of a paper in the JOURNAL free of charge, and additional offprints can be purchased if ordered in advance.

SUBSCRIPTIONS

The JOURNAL OF FLUID MECHANICS is published twice a month. Single parts £2.50 net ($7.50 in the U.S.A.) plus postage. Four parts form a volume The subscription price of a volume (which includes postage) is £8.00 net ($25.00 in the U.S.A.).

Copies of the journal for subscribers in the United States of America are sent by air to New York to arrive with the minimum delay. Second class postage is paid at New York, N.Y.

Claims for missing issues will be considered only if made after receipt of the subsequent issue.
